Product Details

Product Description X-15 Skeletonized 50 Round Drum Magazine for AR-15 & M16

This is one of the most compact 50 round magazines ever produced for the AR-15. The X-15 is engineered around our proven coil magazine technology which allows side by side staging of ammunition in a single stack. Because of our patent pending tension relief device, the X-15 can operate for an almost unlimited number of spring loads and can even perform in weapons with capabilities of up to 1100 rounds per minute. The streamlined design allows for zero separation of the ammunition during operation which prevents malfunctions and allows for an exceptionally compact profile. The X-15 is shorter than a standard 30 round magazine and three inches shorter than a quad stack magazine. The user friendly ergonomics and ability to use a sling make this magazine ideal for 3-gun competitors. Manufactured of the highest grade materials which give it unparalleled reliability and strength. The critical components of the mechanism are coated in Cerakote for friction reduction and proven reliability without the need for lubrication. * 300 AAC Blackout will work in the drums but due to them being designed around a 62 gr 5.56 cartridge, it is generally best to stick to the 208 gr and down 300 BLK. 220 gr will work but causes added stress on the internals. Soft Point and hollow point munitions are not recommended for use with the drum.
